

CLEARVIEW GLAZED OVERHEAD DOORS

Filling the need in many applications such as service stations, tyre bays and where extra light or a picture window effect is required, the Clearview overhead door combines a smart clean appearance with long lasting visual appeal. Clearview is a glazed overhead door formed from a series of hinged extruded anodised aluminium rails & stiles

As standard Clearview doors are double glazed using 2.5mm thick acrylic glass clear material, other forms of glazing are available . The bottom section of the door is an insulated section with heavy duty foot plate handle and double edged neoprene weather seal. Locking is by spring loaded shoot bolt

Clearview Colour

As an option the Clearview door can be supplied with its frame and any insulated sections in a Ral colour finish

Track System

The position of the door in a building may require that a specific track configuration is used to optimise the free space above the door. We recommend that the space between the door tracks and the roof is kept to a minimum (exact dimensional details available on request or see on www.avondoors.co.uk)

Options

Electric operation
Integral pass doors
Remote Controls
Safe edges
